## **SPECIAL GROUP PROJECT DEVELOPMENT**

*by Leslie France*

The following articles describe the special group projects developed by members at the 1989 Professional Seminar.

### **HEALING TAPES GROUP**

This year's Professional Seminar realized the reactivation of the Healing Tapes group of 1987, initiated to develop Hemi-Sync® tapes for use with specific illnesses or diseases. Russ Russell, with contributions from this year's group, composed the script for an introductory tape designed to precede the use of specific healing tapes. Anna Schober, M.D., and Connie Townsend, M.D., will draft scripts for identified illnesses or diseases.

Project Leader: Suzanne Jonas, Ed.D

### **TRANSITIONS TAPE GROUP**

The Transitions Tape group was also originally formed at the 1987 Professional Seminar under the leadership of the late Ruth Domin to assist individuals through periods of major life transition, particularly death. The script of the original tape, which was voiced, embedded with Hemi-Sync®, and tested, was revised by this year's group, integrating the recommendations of those who had used the tape. The group reported that it was gratifying to be able to complete this project that Ms. Domin and her patients had worked on so hard and so long. The group also recommended a six-tape transition series.

### **PHASE IN STABILIZATION STATE GROUP**

This project group convened for the first time this year to consider the use of specific Hemi-Sync frequencies as an intervention tool in treating schizophrenia. Following investigations into the development of appropriate frequencies, the group will submit a proposal for the production of special research tapes.

Project Leaden Larry Lambertson, M.D.

### **CONTROLLED SENSORY ENVIRONMENT CHAMBER GROUP**

Acknowledging the widening use of specialized testing environments, this group formed to consider and identify technical and human engineering requirements for developing a Controlled Sensory Environment Chamber. Such an environment would be applicable in a

variety of research settings, including the investigation of Hemi-Sync, and could be leased to research laboratories.

Project Lead Joe McMoneagle

### **EXECUTIVE TRAINING SEMINAR GROUP**

Preliminarily titled the Executive Odyssey, this project was initiated in response to the perceived need for accelerated development in the corporate environment. The purpose of this project is to develop and conduct a pilot program for managers and executives to increase their group performance and results through increased personal awareness and power. The Hemi-Sync technology and methodology would be positioned as a scientific, technological tool for obtaining business results.

Project Lead Edward Quinn
